

BLUEsat

The UNSW Student Satellite Project

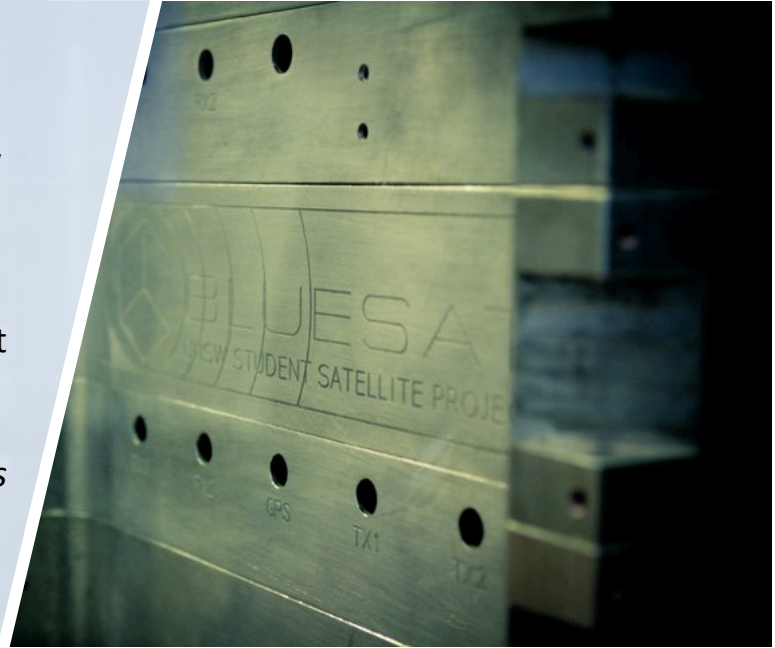

Never Stand Still

Engineering

Australian Centre for Space Engineering Research

The Mission: To provide UNSW undergraduates with an opportunity to engineer spacecraft

The Project: To design, build and test a satellite that is capable of supporting advanced payloads and CubeSat missions, *in between classes*

Our amateur radio satellite was created from scratch without any faculty, industry or postgraduate assistance.

We have completed a working model which will undergo a stratospheric balloon test launch in December 2014.

We are recruiting now! (Years 1-4)
